

**1995 LIST OF SITES REVIEWED FOR POSSIBLE PAST INVOLVEMENT
IN NUCLEAR WEAPONS AND NUCLEAR ENERGY RELATED ACTIVITIES**

(Also known as the "FUSRAP LIST")

September 21, 2000

**1995 LIST OF SITES REVIEWED FOR POSSIBLE PAST INVOLVEMENT
IN NUCLEAR WEAPONS AND NUCLEAR ENERGY RELATED ACTIVITIES
(Also known as the "FUSRAP LIST")**

BACKGROUND

As part of its review of agency records to identify sites for possible inclusion in the Formerly Utilized Sites Remedial Action Program (FUSRAP), the Department of Energy (DOE) compiled an internal working list in 1995 of 577 site entries that date back to the Manhattan Engineer District (MED). The MED is the original precursor to the Atomic Energy Commission (AEC), the Energy Research and Development Administration (ERDA) and the DOE.

The FUSRAP review sought to identify sites that may have been involved in nuclear weapons and nuclear energy related activities and determine which of these sites would require environmental cleanup.

THE FUSRAP REVIEW

File and field reviews of these sites -- some of which date back to the 1940's -- began in the early 1970's by the AEC, continued under ERDA and then the DOE. After the DOE's reviews were completed, and with instructions from Congress to include several sites, forty-six sites were identified for clean-up as part of the FUSRAP program. By 1997, when Congress transferred the FUSRAP program to the Army Corps of Engineers, the DOE had completed cleanup at twenty-five of the forty-six FUSRAP sites. The FUSRAP list of 577 site entries remained an internal working document of the DOE and the Army Corps of Engineers until September 21, 2000.

A HISTORICAL NOTE ON THE 1995 FUSRAP LIST

The FUSRAP list, compiled in 1995, reflects a snapshot of records related to these sites that had been reviewed at that time. It is an historical document and, therefore, the information is not up-to-date. The DOE has begun working to update, correct and clarify the information contained in the list. Revised information will be periodically posted to the DOE web sites.

UNDERSTANDING THE FUSRAP LIST

The list includes the following types of sites:

- C *Private contractor sites* that performed nuclear weapons and nuclear energy-related work for the Government;

- C *Government sites* being cleaned up by government programs other than the FUSRAP program;

- C Private or government sites that were involved in nuclear weapons and nuclear energy activities, but where no radioactive material was released to the environment;

- C Private or government sites that were involved in defense activities, but did not receive any radioactive materials (sites that carried out engineering, contracting or administrative operations); and

- C Sites with no involvement in nuclear weapons and nuclear energy activities, but were reviewed in response to allegations, inquiries or concerns.

NOTE: Not all of the sites on the list were involved in nuclear weapons and nuclear energy production or have been contaminated with radioactive materials. Nonetheless, to address questions raised about this list of sites, and to help provide a publicly accessible source of information to answer questions in the future, the DOE is posting this internal working list from 1995 on the DOE and DOE-EM web sites.

In addition to the operations at the sites identified on the internal working list, the AEC conducted operations at certain military installations that are currently classified and not included in the FUSRAP list. These sites were referred to the Department of Defense in 1982.

The hand written markings on this 1995 document were on the original file copy and do not reflect any recent effort to alter the historical document.

THE FUSRAP LIST: A COLUMN BY COLUMN LOOK

- "File #"** Refers to record-keeping used at that time. In most cases, this file number is no longer being used.
- "Site Name"** Refers to the name used in 1995 and may no longer be the most commonly used name for the site.
- "Location"** Based on information available in 1995.
- "Alternative Name"** In some cases, the site was also known by a different name.
- "Status"** Indicates whether a site was: (a) in a Department of Energy program, (b) under the jurisdiction of another Federal Agency, or (c) eliminated from further consideration for the FUSRAP program. The status of many of these sites has changed since this list was compiled in 1995.

NOTE: The 1995 list included the names of individuals that have been redacted to protect those individuals' privacy in accordance with Freedom of Information Act rules and procedures.

KEY TO COMMONLY USED TERMS

The terms used to indicate status in the FUSRAP list are notations of whether the site required cleanup and, if so, to which agency the DOE referred the site for further action. Where a Government agency other than DOE is listed in the "status" column, the results of DOE's review were provided to that agency. In most of these cases the site was already being managed by the other agency and DOE notified that agency that it had completed its file review of that particular site.

- Eliminated** The site was "eliminated" from further consideration because it was found not to be contaminated under screening criteria. Some of these sites were determined to have never received radioactive materials (e.g., served as engineering, contracting or administrative operations). Others were found to have no higher than acceptable levels of radioactivity because any radioactive material was handled in small quantities or kept in a contained state. In still

other cases, sites were eliminated because DOE lacked legal authority to conduct cleanup operations. In these cases DOE notified the appropriate federal and state agencies.

DOE The site was placed in a DOE program for cleanup (as summarized below).

- * **Argonne:** Argonne Laboratory, Chicago
- * **WSSSRAP:** Weldon Spring Site Remedial Action Program
- * **Los Alamos:** Los Alamos site, New Mexico
- * **BCLDP:** Battelle Columbus Laboratory, Columbus, Ohio
- * **Mound:** Mound Site, Miamisburg, Ohio
- * **Pantex:** Pantex Facility, Amarillo, Texas
- * **Hanford:** Hanford site, Richland, Washington

Naval Reactors The site was addressed by the Naval Reactors Program.

FUSRAP site The site was placed in the Formerly Utilized Sites Remedial Action Program (FUSRAP) for cleanup

- * TBD: "To be Determined"
- * VP: "Vicinity Property"

UMTRAP site The site was placed in the Uranium Mill Tailing Remedial Action Program (UMTRAP) for cleanup.

TVA The site was owned or operated by the Tennessee Valley Authority (TVA).

NRC The site was licensed by the Nuclear Regulatory Commission (NRC).

DOD Results of the review were provided to the Department of Defense (DOD).

State Results of the review were provided to a relevant state agency.

EPA Results of the review were provided to the Environmental Protection Agency (EPA). NPL is an acronym for the Superfund National Priority List.

USGS The site was owned or operated by the U.S. Geological Survey.

BIA The site was owned or operated by the Bureau of Indian Affairs.

31-Aug-95
