Re: City of Elko – Landfill Expansion (revised)

Dear Jon,

Please find the enclosed revised supporting documentation for the application to expand of the City of Elko Landfill. Due to the substantial revisions, all the supporting documentation has been reproduced and enclosed. The plans have been revised showing a phased closure based cell development over time. Currently the Solid Waste Facility is permitted at 85 acres. Table 1 of the Closure Plan and Post Closure Plan shows the maximum uncovered acreage based on the closure sequences outlined in the plan. The maximum uncovered acreage will be approximately 50 – 51 acres versus 85 acres. The estimated closure cost for the first closure phase is approximately \$3,122,615 Million. It should be noted that current estimate includes cost for a gas collection system. The Certificate of Insurance for Closure/Post Closure issued for the 2006/2007 showed a Face Amount of \$2,271,685 Million. The City of Elko intends to meet with Nevada Public Agency Insurance Pool to address the variance and provide additional information to NDEP as the review of the application proceeds to demonstrate financial assurance based on the phased closure presented in the plan.

Please contact me at 775.777.7217 once you have had the opportunity to review the application for completeness.

Sincerely,

Scott A. Wilkinson
City of Elko; Development Manager
