Permit NS0089026, WEED HEIGHTS DEVELOPMENT:

The Permittee owns a Wastewater Treatment Facility (WWTF) located approximately 2.5 miles northwest of Yerington, NV on the site of the former Anaconda open-pit copper mine. The treatment system consists of three (3) 38,000-gallon compartmented septic tanks, two (2) clay-lined facultative treatment ponds, and two (2) unlined evaporation/percolation ponds. The Permittee is planning to construct a new WWTF and discontinue use of the current system. The relocated WWTF will include septic tanks for primary wastewater settling (4 x 25,000 gal. tanks), facultative treatment ponds for biological treatment (one (1) primary and one (1) secondary pond and one (1) solar powered recirculation unit in the primary pond), effluent infiltration basins (two (2) disposal basins), and groundwater monitoring wells (one (1) upgradient and two (2) downgradient wells). The proposed relocation site for the WWTF is sited approximately one-half mile NNW from the housing area and RV Park. Influent flow to the treatment system originates in the community of Weed Heights which includes approximately 300 residential units, one coffee shop, one RV-Park, and several small businesses. The applicant is currently permitted to discharge 0.063 million gallons of effluent per day to the facultative and disposal ponds.

On the basis of preliminary review of the requirements of the Nevada Revised Statutes, as amended, and implementing regulations, the Administrator proposes to issue Permit NS0089026 to discharge for a five (5) year period, subject to certain effluent limitations.
