

Tailings Impoundment Draindown Estimate Methodology Utilized by BMRR

Susan Yang

Ph.D, P.E., Bureau of Mining Regulation and Reclamation

Why?

NAC 519A.360 Amount of surety required.

4. In determining the cost of executing the plan for reclamation, the operator shall consider all activities in the plan for reclamation that are required by NAC 519A.010 to 519A.415, inclusive, or chapter 519A of NRS, including, if appropriate:

(b) Process Fluid Stabilization

How?

HYDRUS Model

Tailings Impoundment and Collection

(labor, material, equipment)

HYDRUS

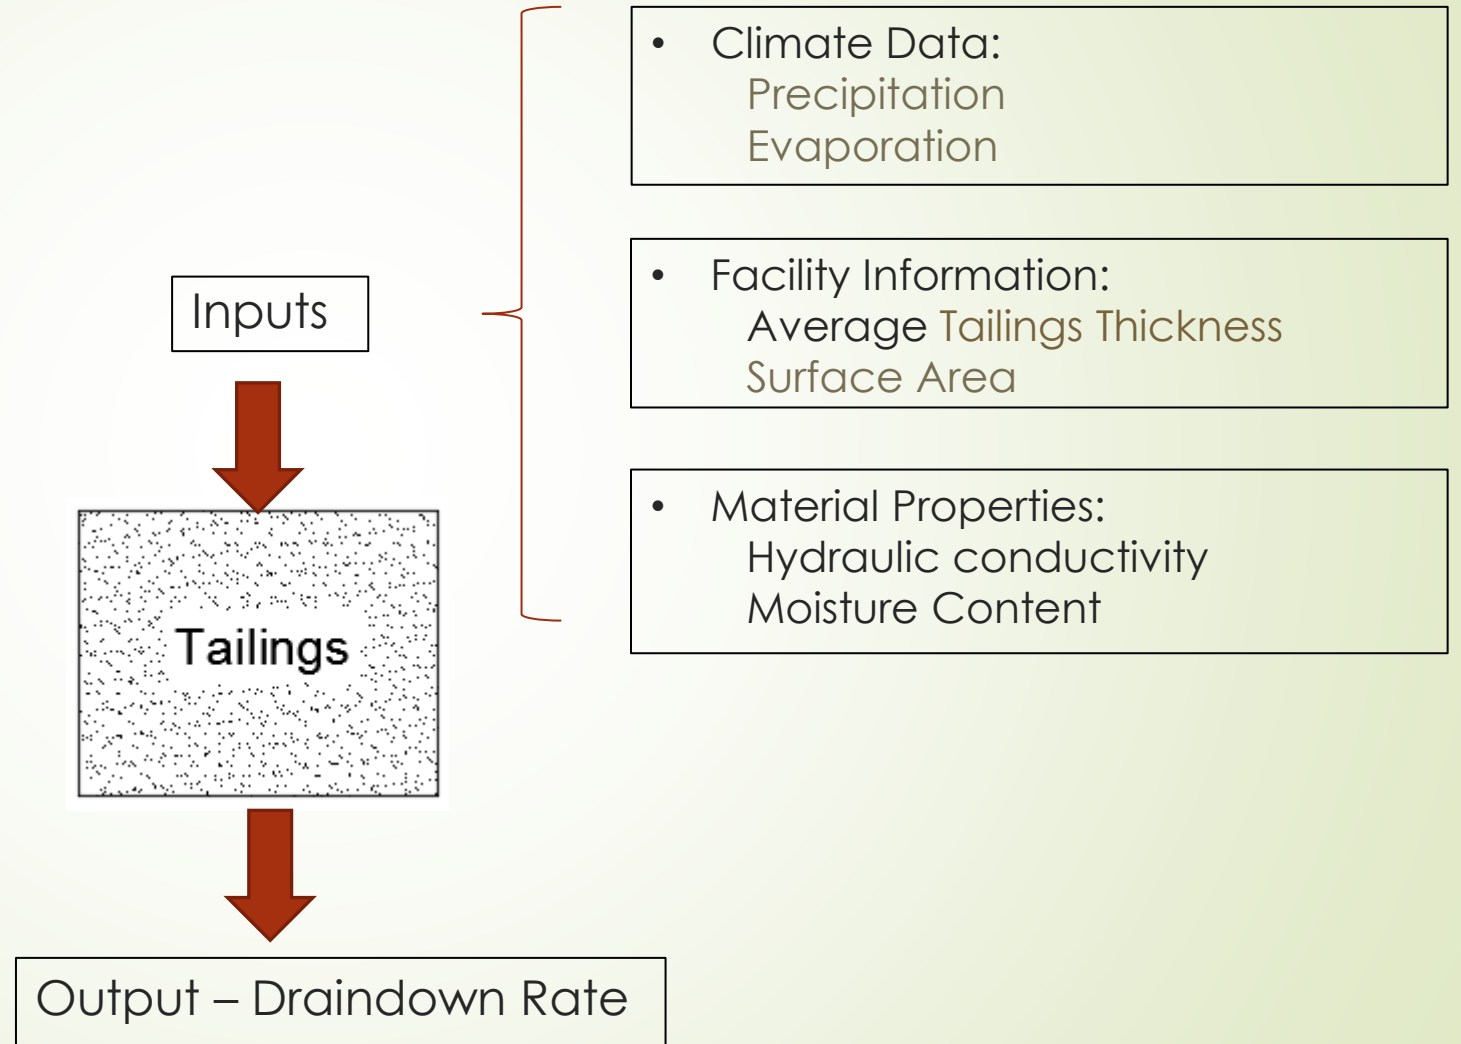

- ▶ HYDRUS is a Windows-based modeling software for analysis of water flow, heat, and solute transport in saturated porous media.
- ▶ HYDRUS-1D is a public domain software and can be used to simulate in one-dimension.

It can be downloaded from the website:

<https://www.pc-progress.com/en/Default.aspx?H1d-downloads>

- ▶ HYDRUS 2D/3D extends the simulation capabilities to the second and third dimensions.

Process Fluid Cost Estimator (PFCE)
(labor, material, equipment)

What is Process Fluid Cost Estimator (PFCE) ?

- ▶ Process Fluid Cost Estimator (PFCE) is an estimation tool for the calculation of labor, equipment and material costs required for managing the heap leach and tailings storage facility process fluids during closure.
- ▶ Two important concepts in PFCE:

What is Phase I in Process Fluid Cost Estimator (PFCE)?

Phase I is the duration when the recirculation occurs.

What is Phase II in Process Fluid Cost Estimator (PFCE)?

- Phase II is the duration when the active evaporation occurs after Phase I.

Process Fluids Cost Estimator (PFCE) - Phase I

Phase I = 2 months

Total Recirculated Volume = 2,000,000 gals

Month #	Collection Pond								Tailings Impoundment							
	Inflow		Outflow			NetFlow	Pond Inventory	Fluid Depth	Inflow		Outflow			NetFlow	Pond Inventory	Fluid Depth

Phase II Duration & Active Evaporated Volume

Process Fluid Cost Estimator (PFCE)

<u>Recirculation</u>	
Pumping systems must be consistent with approved WPCP	
Facility	Facility-1
Total volume recirculated (millions of gallons)	2

<u>Process Fluid Stabilization</u>	
Time-frames to be determined by HLDE or other acceptable method. Provide supporting documentation.	
Facility	Facility-1
Phase I Duration (months) (6)	2
Phase II Duration (months) (7)	4

<u>Active Evaporation</u>	
Facility	Facility-1
Total volume evaporated (millions of gallons) (8)	9.0

(6) Input number of months HLDE or other model shows recirculation is taking place.				
Phase I duration for SITE will be selected from HLP or TSF with longest Phase I duration.				
(7) Input number of months HLDE or other model shows active evaporation is taking place.				
Only include the actual number of months that evaporators are running.				
Phase II duration for SITE will be selected from longest HLP or TSF Phase I + Phase II duration less SITE Phase I duration.
