EXECUTIVE SUMMARY

The subject property is located on the western edge of the Georgetown Ranch at the base of Squaw Peak approximately two miles north of the City of Ely, Nevada on Lackawanna Road. McGinley and Associates, Inc. (MGA) has performed a Phase I Environmental Site Assessment (ESA) of this property at the request of the State of Nevada Division of Environmental Protection and on behalf of the City of Ely to determine recognized environmental conditions (RECs) in connection with the subject property.

The subject property is located on a portion of a 1,444.5 acre parcel known as White Pine County Assessor’s Parcel Number (APN) 010-420-06. The site itself is approximately 40 acres in size and consists of three main areas including a former processing area, a former ore crushing area, and a former tailing pond area. The processing area was observed to have upper and lower portions both consisting of a concrete building pad with former equipment and debris scattered throughout. In addition, a debris dump and berm area was observed just east of the lower processing area. The ore crushing area consisted of a stepped concrete structure with a ball mill located near the bottom tier of the structure. A large area that appeared to consist of processed material was observed below the stepped concrete structure and proximal to Lackawanna Road. Evidence of a transformer location was observed in this area. Lastly, evidence of the former tailing ponds were observed east of Lackawanna Road within Steptoe Valley. Although access to the former pond area was not gained, observations from Lackawanna Road indicated that the former ponds have soil berms surrounding the area and debris and drums were observed within these berm areas. Throughout the site, soil piles of varying color were observed. These piles may be material previously processed at the mill site.

Access to the property is gained via Lackawanna Road, which crosses the site from south to north near the bottom of the hill slope at the edge of Steptoe Valley. Several non-surfaced roads cross the site and appear to have been used in the past by mill workers to access all portions of the site. The subject property is bordered on the north by undeveloped land consisting of vegetation on moderate slopes. A residential home and commercial construction business were observed approximately 400 feet from the northern edge of the property. South of the subject property is undeveloped land consisting of vegetation on moderate slopes while west of the subject property is steep slopes consisting of trees and shrubs. East of the former tailing ponds is undisturbed valley lowlands consisting of freshwater marsh and sagebrush.

The subject property is located within Steptoe Valley of east-central Nevada at an elevation of approximately 6,460 feet above mean sea level near the upper levels of the site and approximately 6,270 feet above mean sea level near the former tailing ponds. Average minimum and maximum annual temperatures for Ely, Nevada during the period from 1893 to 2012 are approximately 28.3 and 61.1 degrees Fahrenheit, respectively, while total annual precipitation averages about 9.70 inches. The subsurface geology of the subject property has been mapped as Quaternary-age Older Alluvium. The Older Alluvium is composed of silt, sand, and gravel with localized, poorly consolidated lake deposits. Surface soils at the site consist mainly of Palinor-Urmafot-Palinor association. This soil unit typically has slopes ranging from four to 50 percent, a very low hydraulic conductivity of saturated soil, and a very low available water capacity.

No streams, ponds, or wetlands were observed on the subject property and the subject property is not located within a 100-year flood zone. However, the lower portion of the site (tailing pond area) is located proximal to a series of springs known as Lackawanna Springs. The closest major surface water body to the subject property is a system of creeks located within Steptoe Valley to the east. The creeks are known as Murry Creek and Steptoe Creek and flow from south to north. Groundwater conditions on the subject property have not been positively ascertained. However, depth to groundwater in the area of the subject property is estimated to be greater than 60 feet below ground surface (bgs) on the higher slopes and less than 60 feet bgs near the former tailing pond area. Groundwater flow direction is likely toward the northwest. No wells were observed on the subject property at the time of the site visit and a
search of the State of Nevada Division of Water Resources (NDWR) database did not indicate any wells on the property.

A historical assessment and interviews provided information that indicates the Lackawanna Mill Site was first developed in the 1950s and was finally shut down in the early 1980s. Over that time, multiple mining companies utilized the mill site for various ore processing including gold, silver, and lead. According to a former worker at the mill, the upper processing area was specifically used during his employment (1974-1980) as a refinery for gold and silver. This portion of the facility utilized furnaces for processing the crushed ore. Diesel fuel was utilized to run the furnaces. The ore crushing area utilized a ball mill to crush various ores that were brought to the site for processing. Based on the interview with the former worker, this portion of the site was also utilized for a tank-based cyanide leaching system. Bottom sediments were removed from the tanks and placed within the unlined tailing pond system located east of Lackawanna Road. Additionally, a “large power plant” was erected to run the ball mill and evidence of this power plant was observed during the site visit.

A regulatory review was performed to search for regulatory sites located within a one-mile radius of the subject property. Although the subject property was not identified in the search as a regulatory site, it was identified as an orphan site. It appears that the listing information is not precise enough to map correctly. The listing refers to the former United States Environmental Protection Agency (EPA) Superfund Site Information for the former mill site. It appears that in 1980, after the shut-down of the mill site, the EPA provided a preliminary assessment of the site in order to help determine if the site was disserving of Superfund status. An additional site inspection took place in 1987 and an expanded site inspection took place in 2000. The regulatory review found no other sites within the search distances. In addition, MGA reviewed sites which EDR was not able to map and which are referred to as orphan sites. A review of these sites appears to indicate that with the exception of the “Egan Milling Co Inc” (subject property) site, each are at locations that are considered likely to be hydrologically downgradient from, or cross gradient to, the subject property, have had no reported releases, have had no reported violations of hazardous waste regulations, and/or have received regulatory closure. For this reason, the sites are considered unlikely to cause, or to have caused in the past, environmental impact to the subject property.

Reconnaissance of the publicly accessible, easily visible portions of those properties located immediately adjacent to the subject property did not reveal site conditions that serve as recognized environmental conditions to the subject property.

Upon conclusion of our Phase I ESA, and based on the information reviewed, this assessment has revealed evidence of recognized environmental conditions (RECs) in connection with the subject property. These RECs are as follows:

- Historic use of the property as a mill site: Based on historic information and interviews regarding the past uses of the property, it appears that previous site activity utilized many chemicals and processed different materials which led to the dispersal of concentrated contaminants throughout the site.

- Topographic evidence and anecdotal information indicates the former presence of diesel tanks and diesel spills at the mill site.

- Observations made during the site visit indicate that past disposal practices may have been initiated on site without regard to the environment or regulatory requirements.

Therefore, MGA is of the opinion that, although limited characterization of the mill site has occurred in the past via sampling activities, further environmental investigations are warranted on the subject property at this time. MGA recommends collection of soil samples throughout the site to determine the extent, if any, of contamination from past mill processing activities. In addition, MGA recommends that the discarded and damaged capacitors be removed and disposed at a landfill permitted to accept polychlorinated biphenyl (PCB) waste of this type.
1. INTRODUCTION

1.1 Purpose

This report presents the findings of a Phase I Environmental Site Assessment (ESA) performed on the former mill site located on Lackawanna Road, approximately two miles north of Ely, Nevada. McGinley and Associates, Inc. (MGA) conducted this investigation for the purpose of identifying recognized environmental conditions (RECs) on the property and/or nearby properties in accordance with the 2005 American Society of Testing and Materials (ASTM) standards for the performance of Phase I Environmental Site Assessments (ASTM E 1527-05), as well as the standards established by the U.S. Environmental Protection Agency (EPA) in 2006 for conducting All Appropriate Inquiry (AAI).

1.2 Conditions of Contract

MGA performed this work for the Nevada Division of Environmental Protection (NDEP) on behalf of the City of Ely as part of the State of Nevada Brownfields program pursuant to our proposal dated May 31, 2012.

1.3 User Responsibilities

In accordance with ASTM E 1527-05, the user of this Phase I ESA is required to provide information to help identify the possibility of RECs. In order to obtain this information, a questionnaire was provided to a representative of the City of Ely. A copy of the completed questionnaire can be found in Appendix A.

1.4 Scope of Work

The scope of work performed and procedures utilized included the following tasks:

- **Environmental setting review** to determine potential pathways for the migration of contaminants onto, or off of, the subject property;
- **Site reconnaissance** of the subject property and observation of adjacent properties and vicinity by a qualified person under the direct supervision of an MGA Certified Environmental Manager;
- **Review of site history/land use** through historic aerial photographs, a historic topographic map, local jurisdiction records, and a personal interview;
- **Review of regulatory agency records** to identify and assess any listings of regulatory permits, registrations, or enforcement actions at the subject site or proximal sites, through both a commercial database search and agency inquiries; and,
- **Preparation of this report** that describes all work performed and presents a discussion of the results.
2. SITE CHARACTERISTICS

2.1 Site Location

The property investigated for this Phase I Environmental Site Assessment is located on Lackawanna Road approximately two miles north of the City of Ely, White Pine County, Nevada. Specific geographic positioning system (GPS) coordinates for the site entrance is: Latitude 39°16’59” North, Longitude 114°52’04”. The subject property lies in the western portion of Steptoe Valley at the eastern slopes of the Egan Range (Figure 1). It is listed as White Pine County Assessor’s Parcel number 010-420-06 and is located within Section 03, Township 16 North, Range 63 East of the Mount Diablo Base and Meridian (MDB&M). A copy of the Assessor’s Map that depicts the subject property is provided herein as Appendix B.

2.2 Site Description and Current Usage

The subject property is located on a portion of a 1,444.5 acre parcel known as White Pine County Assessor’s Parcel Number (APN) 010-420-06. The site itself is approximately 40 acres in size and consists of three main areas including a former processing area, a former ore crushing area, and a former tailing pond area. The processing area was observed to have upper and lower portions both consisting of a concrete building pad with former equipment and debris scattered throughout. In addition, a debris dump and bermed area was observed just east of the lower processing area. The ore crushing area consisted of a stepped concrete structure with a ball mill located near the bottom tier of the structure. A large area that appeared to consist of processed material was observed below the stepped concrete structure and proximal to Lackawanna Road. Evidence of a transformer location was observed in this area. In addition, what appeared to be a possible mine shaft was observed up the hill and southwest of the ore crushing area. Lastly, evidence of the former tailing ponds were observed east of Lackawanna Road within Steptoe Valley. Although access to the former pond area was not gained, observations from Lackawanna Road indicated that the former ponds have soil berms surrounding the area. Debris and drums were observed within these bermed areas. Throughout the site, soil piles of varying color were observed. These piles may be material previously processed at the mill site. Access to the property is gained via Lackawanna Road, which crosses the site from south to north near the bottom of the hill slope at the edge of Steptoe Valley. Several non-surfaced roads cross the site and appear to have been used in the past by mill workers to access all portions of the site. The layout of the subject property is illustrated in Figure 2.

No utilities are currently supplied to the subject property.

2.3 Adjacent Properties

The subject property is bordered by the following:

<table>

</tbody>
</table>
3. ENVIRONMENTAL SETTING

3.1 Regional Physiographic Setting

The subject property is located within Steptoe Valley of east-central Nevada at an elevation of approximately 6,460 feet above mean sea level near the upper levels of the site and approximately 6,270 feet above mean sea level near the former tailing ponds. Average minimum and maximum annual temperatures for Ely, Nevada during the period from 1893 to 2012 are approximately 28.3 and 61.1 degrees Fahrenheit, respectively, while total annual precipitation averages about 9.70 inches (Western Regional Climate Center (WRCC), 2012).

3.2 Geologic Conditions

Based on the geologic map of the adjacent Ely Quadrangle to the south, the subsurface geology of the subject property is extrapolated to be Quaternary-age Older Aluvium. The Older Alluvium is composed of silt, sand, and gravel with localized, poorly consolidated lake deposits. Surface soils at the site consist mainly of Palinor-Urmafot-Palinor association. This soil unit typically has slopes ranging from four to 50 percent, a very low hydraulic conductivity of saturated soil, and a very low available water capacity (Natural Resources Conservation Service, 2010).

3.3 Surface Water Conditions

No streams, ponds, or wetlands were observed on the subject property and the subject property is not located within a 100-year flood zone. However, the lower portion of the site (tailing pond area) is located proximal to a series of springs known as Lackawanna Springs. The closest major surface water body to the subject property is a system of creeks located within Steptoe Valley to the east. The creeks are known as Murry Creek and Steptoe Creek and flow from south to north.

3.4 Groundwater Conditions

Groundwater conditions on the subject property have not been positively ascertained. However, depth to groundwater in the area of the subject property is estimated to be greater than 60 feet below ground surface (bgs) on the higher slopes and less than 60 feet bgs near the former tailing pond area. Groundwater flow direction is likely toward the northwest. No wells were observed on the subject property at the time of the site visit and a search of the State of Nevada Division of Water Resources (NDWR) database did not indicate any wells on the property.
4. SITE RECONNAISSANCE

4.1 Methodology

For the purpose of assessing current site conditions, a visit to the subject property and surrounding areas was conducted on June 12 and June 13, 2012 under warm and sunny conditions. During the site visit, observations were made to identify recognized environmental conditions (RECs). As defined by ASTM E 1527-05, a recognized environmental condition is the presence, or likely presence, of any hazardous substances or petroleum products on the property under conditions that indicate an existing release, a past release, or a material threat of a release of hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term REC is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Photographs taken during the site reconnaissance are provided in Appendix C.

4.2 Site Description

The subject property consists of three main areas including a former processing area, a former ore crushing area, and a former tailing pond area. The site in general lies on the eastern slope of the Egan Range which is mainly covered with vegetation consisting of trees and low lying shrubs. Several non-surfaced roads cross the site and appear to have been used in the past by mill workers for access to all portions of the site.

During the site visit, the former processing area and ore crushing area were walked and observed for recognized environmental conditions. Access to the former tailing pond area was not gained. However, the area was observed from Lackawanna Road above.

The processing area itself is comprised of the former building location, a debris dump, and soil piles consisting of unprocessed feed material and material that was previously processed. The former building location is comprised of two levels. The lower level consists of a large concrete building pad with former equipment still remaining. The equipment appeared to be in a state of disrepair. Debris was observed throughout this portion and it appears that some of the debris has been used as targets for shooting practice. Approximately 15 to 20 capacitors were observed on the concrete pad. Many of those were found in piles and several dark stains were observed near or around the capacitors. Three other capacitors were observed within the natural vegetation proximal to this lower portion. The upper level consists of a concrete building pad and segregated storage areas still containing empty drums either unlabeled or labeled as “sodium cyanide”. An enclosed concrete shelter was observed and appears to have been used recently as living quarters. In addition, multiple piles of whitish/gray material were observed south of the upper level. Beyond the whitish material were additional piles consisting of reddish material.

The ore crushing area consisted of a stepped, concrete structure with a ball mill located on the second tier from the bottom of the structure. A large area that appeared to consist of processed material of whitish and reddish colors was observed below the stepped concrete structure and proximal to Lackawanna Road. Further, evidence of a transformer location was observed in this area. Debris, including corroding drums, miscellaneous scraps of metal, and broken pieces of high-voltage transformer bushings were observed.

Lastly, the former tailing pond area was observed from above via Lackawanna Road. Remnants of what appeared to be a former wooden flume structure was noted south of the area. The pond area appeared to be designed with soil berms surrounding most of the tailing area. Piles of material and debris, including drums, were observed in the initial section of the berm area.
4.3 Surrounding Properties

The subject property lies within a rural area just north of the City of Ely. A residential home and construction business was observed north of the property. An undisturbed section of vacant land was observed between the mill site and the development. Large construction equipment was noted on this property. To the south and west lies undisturbed and vacant land covered with trees, shrubs, and low-lying vegetation. To the east is the flood plain of Steptoe Valley. Reconnaissance of the publicly accessible portions of those properties located immediately adjacent to the subject property revealed no RECs.

4.4 Observations During Reconnaissance

An MGA representative visited the subject site on June 12 and June 13, 2012. The entire site was walked and observed for RECs. The following is a list of some of the items of interest that were looked for during the site visit. If the item was not discovered, it will be noted as “Not Observed”. If the item was observed during the site visit, it will be noted as “Observed” and a short description of the observation will follow.

- Staining or discoloration of soil and/or pavement

  *Both staining and discoloration of soil was observed on site. Staining of the concrete pad near discarded capacitors was observed. In addition, multiple areas of soil staining was observed during the site visit.*

- Wastewater systems, septic systems, sumps, and/or seeps.
  
  Not Observed

- Wells
  
  Not Observed

- Patched areas of asphalt or concrete
  
  Not Observed

- Standing surface water, ponds, farm tanks, etc…
  
  Not Observed

- Railroad spurs
  
  Not Observed

- UST systems / vent pipes
  
  Not Observed

- Aboveground Storage Tanks
  
  Not Observed

- Suspect PCB containing equipment

  *15 to 20 discarded capacitors were observed on the subject property. Several were observed with bullet holes and several appeared to have been opened in the past. Staining was noted proximal to several of the capacitors located on the concrete pad.*

- Paint booths, spray rigs, etc.

  Not Observed
• Unorthodox heating and ventilation systems
  Not Observed
• Emergency generators
  Not Observed
• Unusual odors

_A sweet odor was sensed in several of the locations proximal to discarded capacitors._

• Dumping, disturbed soils, direct burial activity

_Disturbed soils and evidence of dumping was observed in multiple locations throughout the site._

• Floor drains
  Not Observed
• Air emissions
  Not Observed
• Industrial or manufacturing activities
  Not Observed
• Distressed, discolored or stained vegetation
  Not Observed
• Oil or gas well exploration or refinery activities
  Not Observed
• Surface water contamination
  Not Observed
• Farm waste, feed lot spoils, or manure stockpile
  Not Observed
• Prolonged use, misapplication or storage of pesticides
  Not Observed
• Discharges or run-off of potential contaminants from off-site sources
  Not Observed
• Basements and/or subsurface vaults
  Not Observed

## 4.5 PCB Sources

Discarded and damaged capacitors were observed proximal to the processing area located on the subject property. Approximately 20 of these capacitors were found. One was observed within the mine dump located approximately 100 feet east of the processing area. The capacitors had labels indicating they were Westinghouse Water Cooled Inerteen Capacitors. According to the material safety data sheet (MSDS) for Inerteen coolant manufactured prior to 1977, the material consists of 99.8% PCBs and 0.2% phenyl glycidyl ether.
5. SITE HISTORY AND LAND USE

A historical assessment of the subject property was performed through a search and review of City street directories, Sanborn fire insurance maps, historic aerial photographs, County records, and interviews. The purpose of the historical assessment was to identify historical recognized environmental conditions (HRECs) associated with the property. As defined in ASTM E 1527-05, a historical recognized environmental condition is one that, in the past, would have been considered a recognized environmental condition, but which may or may not be considered as such currently. A summary of our historical assessment is presented below.

5.1 City Street Directories
City directory listings were not available for the subject property.

5.2 Historic Aerial Photograph Review
Historic aerial photographs were provided by EDR covering the area of the subject property for the years 1976, 1982, 1994, 1999, and 2006. A current aerial photograph was observed online utilizing various websites. Aerial photographs for years other than these dates were not reviewed. Each of the aerial photographs reviewed were taken at a relatively high altitude and a few are not particularly clear. In all aerial photographs reviewed, the subject property appears to be disturbed and the tailing pond area is visible. A copy of the aerial photograph report reviewed is provided in Appendix D.

5.3 Sanborn Fire Insurance Maps
Sanborn fire insurance maps were not published for the area surrounding the subject property. A certified report of those findings is included in Appendix E.

5.4 Historic Topographic Maps
Historic topographic maps were provided by EDR covering the area of the subject property for the years 1952, 1958, and 1979. Topographic maps for years other than these dates were not reviewed. The earliest map reviewed (1952) appears to show the subject property as undeveloped with an airway beacon nearby. The 1958 and 1979 maps display the site as the Baltimore Mill. Tailings ponds are notated to be in the general vicinity of the current location. In addition, oil storage is notated on the map. This is considered a REC in relation to the subject property. A copy of the historic topographic map report is provided in Appendix E.

5.5 White Pine County Assessor’s Office
According to the White Pine County, Nevada Assessor’s Office, the subject property is located within a portion of parcel number 010-420-06. The property is approximately 40 acres in area and is currently owned by the Municipal Water Department for the City of Ely. Information was not available to positively ascertain the date of which the City of Ely gained ownership of the property. No other information was provided.

5.6 Personal Interviews

5.6.1 Jim Alworth, City Clerk, City of Ely
Prior to the site reconnaissance, a representative for the City of Ely (user) was interviewed with regard to site history and known or suspected environmental issues associated with the subject property. Mr. Jim Alworth, City Clerk for the City of Ely, was able to locate a limited amount historical information regarding the former mining companies that utilized the site in the past.
Although Mr. Alworth was aware of the past use of the site and the type of debris that has been encountered at the site, he was unaware of any regulatory issues associated with the site.

5.6.2 **Ross Rivera, Fire Department Chief, City of Ely**

Mr. Ross Rivera, the City of Ely Fire Department Chief was also interviewed regarding his knowledge of the subject property. Mr. Rivera indicated that he recently became aware of some PCB capacitors that were identified on the property by a City of Ely Councilman after his visit to the mill site. Mr. Rivera removed a tag from one of the capacitors and was able to determine that the capacitor was a PCB containing Westinghouse Water Cooled Inerteen Capacitor. At that time, Mr. Rivera placed barriers in front of the two access roads that lead to the processing area to keep trespassers away from the site. Mr. Rivera also indicated that a large amount of empty drums were kept on site over the years and that they were previously removed as scrap.

5.6.3 **Former Mill Site Worker**

A former worker at the mill site was interviewed regarding his knowledge of the facility. The worker was at the site working between 1974 and 1980. He was able to provide in-depth information regarding the processes that were utilized while he was on site, as well as historical information regarding the use of the mill site prior to his arrival. He indicated that during his time at the mill, the ore crushing area accepted the ore and crushed the material into a fine slurry which was subsequently pumped to cyanide leaching tanks located onsite. The setup was a closed circuit system with zinc precipitation performed to extract the gold out of the cyanide solution. The gold extract was then sent to the processing area which was utilized as a smelter/refinery for gold and silver. The material was treated in diesel-fired furnaces to remove impurities and create bars of silver or gold. The bottom fines within the cyanide tanks were eventually removed and pumped to tailings ponds located across Lackawanna Road to the east. The worker also indicated that the dump site located below and to the east of the processing area was an area that unused and spent chemicals and materials used in the smelting and refining process were disposed of. In addition, the worker spoke of diesel tanks on site and recalled multiple fuel spills from mining equipment and/or construction trucks during his time at the mill site.

The worker also provided information regarding the historic nature of the site. He said he was aware of multiple mining companies which utilized the mill throughout its history. He thought that the mill was first erected in the 1950s and stated that it was shut down for good in 1980. He indicated that most of the equipment onsite was sent to another mill site being erected in South America.
6. REGULATORY AGENCY REVIEW

A regulatory agency review was conducted through both a commercial database search (Environmental Data Resources, Inc. (EDR)) and agency inquiries. The purpose of this regulatory agency review was to ascertain if regulatory actions have been imposed on the subject property, or on properties within the radius guidelines established by the 2005 ASTM Standards for Environmental Site Assessments.

6.1 Environmental Data Resources (EDR) Radius Map Report

At the request of MGA, EDR performed a review of federal, state, and local environmental databases. A copy of the EDR report is included herein as Appendix F. Included within the report are summaries of the regulatory databases reviewed, a listing of sites identified within the search radius, detailed data on the identified sites, and maps showing the locations of facilities reported to have had regulatory action. MGA reviewed and evaluated all of the sites in the EDR report.

The EDR database search was conducted using a 1-mile search radius starting from the subject property. The regulatory agency review did not identify the subject property as a regulatory site. However, the subject property was identified as an orphan site. It appears that the listing information is not precise enough to map correctly. The listing refers to the former United States Environmental Protection Agency (EPA) Superfund Site Information for the former mill site. It appears that in 1980, after the shut-down of the mill site, the EPA provided a preliminary assessment of the site in order to help determine if the site was deserving of Superfund status. An additional site inspection took place in 1987 and an expanded site inspection took place in 2000.

The regulatory review found no other sites within the search distances. In addition, MGA reviewed sites which EDR was not able to map and which are referred to as orphan sites. A review of these sites appears to indicate that with the exception of the “Egan Milling Co Inc” (subject property) site, each are at locations that are considered likely to be hydrologically downgradient from, or cross gradient to, the subject property, have had no reported releases, have had no reported violations of hazardous waste regulations, and/or have received regulatory closure. For this reason, the sites are considered unlikely to cause, or to have caused in the past, environmental impact to the subject property.

6.2 Environmental Protection Agency, Region 9

The EPA Superfund Records Center (SRC), Region 9, was contacted regarding the former assessments and site inspections that took place on the property between 1980 and 2000. The SRC was able to provide documentation pertaining to a Site Inspection Prioritization Report performed in June of 1994 and an Expanded Site Inspection performed in September of 1996. The SRC indicated that no other documentation for the site was found during their search.

6.2.1 Site Inspection Prioritization Report (June 1994)

In June of 1994, a Site Inspection Prioritization Report (SIP) was performed on the mill site by NDEP. The SIP was generated to further evaluate the site using EPA’s Hazard Ranking System (HRS) criteria. The SIP provided information regarding the operational history as well as the regulatory involvement as of the date of the report. Based on the SIP, it appears that prior to 1994, a limited sampling was performed in 1980 and a removal of drums, transformers, and chemicals was performed in 1985. The SIP concluded that:
“Based on the observations made during the SIP site reconnaissance visit, historical file information and photographic documentation, cyanide may be the most significant contamination of potential concern. Other potential contaminants include zinc, mercury, antimony, arsenic, chromium, copper, lead, and nickel.”

According to a Remedial Site Assessment Decision document from September of 1995 and found within the file, further assessment under CERCLA via complete HRS sampling was recommended. However, the priority of this assessment was marked as “Lower”.

6.2.2 Expanded Site Inspection (September 1996)
In September of 1996, the EPA tasked NDEP with providing an expanded site inspection (ESI) on the mill site. The ESI was comprised of both sampling and non-sampling activities. The study was designed to collect adequate data to evaluate the site using the HRS.

According to the sampling and analysis plan submitted by NDEP, sampling activities were focused on the surface water pathway and included drainage patterns from the site and the prominent surface water system in the vicinity of the site and originating from Lackawanna Springs. In addition, slag and/or tailings piles were sampled to characterize the contamination present and the potential for migration. Non-sampling activities performed during the ESI included size verification of wetlands, determination of drainage patterns from Lackawanna Spring flows, identifying any fisheries in the area potentially affected by the system, local use of spring water, and review of White Pine County historical records.

For the ESI, collected samples were analyzed for metals, PCBs, pesticides, cyanide, semi-volatile organic compounds (SVOCs), volatile organic compounds (VOCs), and mercury. Based on the results from the analysis, the ESI concluded that hazardous substance sources on the site included the slag and tailings piles, the flotation/evaporation ponds, the tailings ponds, and the contaminated soil beneath the ceramic debris area at the north end of the smelting structure.

6.3 Nevada Division of Environmental Protection
Based on a review of EPA documents available through the SRC, the NDEP performed a SIP of the mill site in 1994 and an ESI of the mill site in 1996. The documents were reviewed for this report and are described in Sections 6.2.1 and 6.2.2 above. No other files were obtained from NDEP for review.
7. POTENTIAL ENVIRONMENTAL HAZARDS

A review of site-specific, potential environmental hazards was conducted for the purpose of identifying environmental issues not subject to regulatory enforcement action, but which may nevertheless be considered a Business Environmental Risk to the user of this Phase I ESA.

7.1 Asbestos

Asbestos containing material (ACM) has been identified as a potential health hazard, particularly when that material is friable and becomes damaged. Identification and sampling for the presence of ACM are beyond the Scope of Work (as outlined in Section 1.4 of this Report) for this Phase I ESA. However, given the age of the mill site, ACM may be present in portions of the structure and/or equipment that remain on site. Therefore, an ACM survey is recommended to be performed prior to demolition and removal of structures and/or equipment left on site.

7.2 Radon

Radon gas is a colorless, toxic gas derived from the radioactive decay of uranium and other minerals, which are often found within bedrock and unconsolidated sediments. Radon gas can enter homes and other structures through floor cracks and other openings that are in direct contact with the underlying geologic materials. Sampling for the presence of radon gas is beyond the Scope of Work (as outlined in Section 1.4 of this Report) for this Phase I ESA. However, MGA has reviewed the U.S. Environmental Protection Agency (EPA) published report of radon zones for the State of Nevada (EPA, 1993). According to the report, the City of Ely is listed as having an average radon level of 4.3 pCi/L and a 39.3% chance of radon levels greater than 4 pCi/L. The U.S. EPA recommended action level for radon gas is 4 pCi/L. Should the user of this Phase I ESA wish to gain confidence with regard to the risk of radon gas, it is recommended that on-site structures be tested when redevelopment of the site occurs.

7.3 Mold

Molds are naturally occurring organisms that live and reproduce on moist surfaces. Within the interior of a structure, the presence of mold can lead to asthma, allergic reactions, and respiratory problems. Identification and sampling for the presence of mold are beyond the Scope of Work (as outlined in Section 1.4 of this Report) for this Phase I ESA.
8. SUMMARY AND CONCLUSIONS

McGinley and Associates, Inc. (MGA) has performed this Phase I Environmental Site Assessment in accordance with the scope and limitations of ASTM Practice E 1527 – 05 for the subject property known as the Lackawanna Mill Site and located approximately two miles north of the City of Ely, Nevada. A summary of our environmental conclusions is presented below.

8.1 Subject Property Concerns

8.1.1 Recognized Environmental Conditions

Recognized environmental conditions were noted for the subject property and are as follows:

- Historic use of the property as a mill site: Based on historic information and interviews regarding the past uses of the property, it appears that previous site activity utilized many chemicals and processed different materials which led to the dispersal of concentrated contaminants throughout the site.

- Topographic evidence and anecdotal information indicates the former presence of diesel tanks and diesel spills at the mill site.

- Observations made during the site visit indicate that past disposal practices may have been initiated on site without regard to the environment.

8.1.2 Historical Recognized Environmental Conditions

Historical information indicates that the site has only been utilized as a mill site for the mining industry. This past use appears to serve as a historical recognized environmental condition (HREC) for the subject property.

8.2 Surrounding Property Concerns

No recognized environmental conditions were noted on the publicly accessible portions of those properties located immediately adjacent to the subject site.

8.3 Conclusions

McGinley & Associates, Inc. (MGA) has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of the Lackawanna Mill Site located on a portion of White Pine County APN 010-420-06, approximately two miles north of the City of Ely, Nevada. Any exceptions to, or deletions from, this practice are described in Section 9 of this report.

Upon conclusion of our Phase I ESA, and based on the information reviewed, this assessment has revealed evidence of recognized environmental conditions (RECs) in connection with the subject property. These RECs are as follows:

- Historic use of the property as a mill site: Based on historic information and interviews regarding the past uses of the property, it appears that previous site activity utilized many chemicals and processed different materials which led to the dispersal of concentrated contaminants throughout the site.

- Topographic evidence and anecdotal information indicates the former presence of diesel tanks and diesel spills at the mill site.

- Observations made during the site visit indicate that past disposal practices may have been initiated on site without regard to the environment.
Therefore, MGA is of the opinion that, although limited characterization of the mill site has occurred in the past via sampling activities, further environmental investigations are warranted on the subject property at this time. MGA recommends collection of soil samples throughout the site to determine the extent, if any, of contamination from past mill processing activities. In addition, MGA recommends that the discarded and damaged capacitors be removed and disposed at a landfill permitted to accept poly-chlorinated biphenyl (PCB) waste of this type.
9. LIMITATIONS

9.1 General

The conclusions and recommendations presented above are based upon the agreed scope of work outlined in the above report. McGinley and Associates, Inc. makes no warranties or guarantees as to the accuracy or completeness of information obtained from others. It is possible that information exists beyond the scope of this investigation. Additional information, which is not available to McGinley and Associates, Inc. at the time of writing the Report, may result in a modification of the conclusions and recommendations presented. The services performed by McGinley and Associates, Inc. have been conducted in a manner consistent with the level of care ordinarily exercised by members of our profession currently practicing under similar conditions. This report is not a legal opinion, but may under certain circumstances be prepared at the direction of counsel, may be in anticipation of litigation, and may be classified as an attorney-client communication or as an attorney work product.

This report has been prepared for the sole use of the addressee of this report, and cannot be released without consent from McGinley & Associates Inc. If a third party relies on the information provided in this report, McGinley and Associates, Inc. accepts no responsibility for damages suffered by the third party as a result of reliance of information contained in this report, and that nothing contained in this report shall create a contractual relationship or cause the third party to bring suit against McGinley & Associates, Inc.

9.2 Data Gaps

Several data gaps were identified during the course of performance of this Phase I ESA. The data gaps are as follows:

- Aerial photographs prior to 1976 were not available for review.
- Sanborn Maps were not published for the subject property.
- City Directory listings were not available for review.

Although these data gaps exist, other historical evidence was available to provide information detailing the history of the property and these data gaps do not appear to be significant. Therefore, MGA is of the opinion that, should this data become available, the conclusions drawn herein would be unlikely to change.
10. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We certify that, to the best of our knowledge and belief, we meet the definition of Environmental Professionals, as defined in ASTM E 1527-05. We have specific qualifications based on education, training, and experience to assess a property of this nature, history, and setting. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes of the environmental professionals utilized in performance of this Phase I ESA are attached in Appendix H.

Respectfully Submitted:
McGinley and Associates, Inc.

Brett Bottenberg, C.E.M. #1690, Exp. Date 10/7/13
Project Manager

USER QUESTIONNAIRE

Property Address: Lackawanna Mill Site (APN: 010-420-06)

In order to qualify for one of the Landowner Liability Protection (LLP’s) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “Brownfields Amendments”), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that “all appropriate inquiry” is not complete.

1. Environmental Cleanup liens that are filed or recorded against the site (40 CFR 312.25).
   Are you aware of any environmental cleanup liens against the property that are filled or recorded under federal, tribal, state, or local law?  
   No

2. Activity and land use limitations (AUL’s) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).
   Are you aware of any AUL’s, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under the federal, tribal, state, or local law?  
   No

3. Specialized Knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
   As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and the processes used by this type of business?  
   None

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).
   Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?  
   N/A

Initials: JG
USER QUESTIONNAIRE

Property Address: Lackawanna Mill Site (APN: 010-420-06)

(5.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property?
   Yes. Former Mill Site

(b.) Do you know of specific chemicals that are present or once were present at the property?
   No

(c.) Do you know of spills or other chemical releases that have taken place at the property?
   None

(d.) Do you know of any environmental cleanups that have taken place at the property?
   No

(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

   No

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA’s Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

LACKAWANNA ROAD
ELY, NV 89301

COORDINATES

Latitude (North): 39.2853000 - 39° 17' 7.08"
Longitude (West): 114.8687000 - 114° 52' 7.32"
Universal Tranverse Mercator: Zone 11
UTM X (Meters): 683822.8
UTM Y (Meters): 4350394.0
Elevation: 6372 ft. above sea level

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR’s search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list
NPL---------------------, National Priority List
Proposed NPL, Proposed National Priority List Sites
NPL LIENS, Federal Superfund Liens

**Federal Delisted NPL site list**
Delisted NPL, National Priority List Deletions

**Federal CERCLIS list**
CERCLIS, Comprehensive Environmental Response, Compensation, and Liability Information System
FEDERAL FACILITY, Federal Facility Site Information listing

**Federal CERCLIS NFRAP site List**
CERC-NFRAP, CERCLIS No Further Remedial Action Planned

**Federal RCRA CORRACTS facilities list**
CORRACTS, Corrective Action Report

**Federal RCRA non-CORRACTS TSD facilities list**
RCRA-TSDF, RCRA - Treatment, Storage and Disposal

**Federal RCRA generators list**
RCRA-LQG, RCRA - Large Quantity Generators
RCRA-SQG, RCRA - Small Quantity Generators
RCRA-CESQG, RCRA - Conditionally Exempt Small Quantity Generator

**Federal institutional controls / engineering controls registries**
US ENG CONTROLS, Engineering Controls Sites List
US INST CONTROL, Sites with Institutional Controls

**Federal ERNS list**
ERNS, Emergency Response Notification System

**State- and tribal - equivalent CERCLIS**
SHWS, Sites Database

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

**Federal NPL site list**

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

**Proposed NPL: Proposed National Priority List Sites**
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

| Date of Government Version: 03/30/2012 | Source: EPA |
| Date Data Arrived at EDR: 04/05/2012 | Telephone: N/A |
| Date Made Active in Reports: 05/15/2012 | Last EDR Contact: 04/05/2012 |
| Number of Days to Update: 40 | Next Scheduled EDR Contact: 07/23/2012 |

**NPL LIENS: Federal Superfund Liens**
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

**Proposed NPL:**
- NPL site list
- NPL LIENS: Federal Superfund Liens
Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/30/2012  Source: EPA

Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/27/2011  Source: EPA
Date Data Arrived at EDR: 02/27/2012  Telephone: 703-412-9810

Number of Days to Update: 14  Next Scheduled EDR Contact: 09/10/2012
Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing
A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010  Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011  Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011  Last EDR Contact: 04/12/2012
Number of Days to Update: 36  Next Scheduled EDR Contact: 07/23/2012
Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/28/2011  Source: EPA
Date Data Arrived at EDR: 02/27/2012  Telephone: 703-412-9810

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
**Federal RCRA non-CORRACTS TSD facilities list**

**RCRA-TSDF:** RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

**Federal RCRA generators list**

**RCRA-LQG:** RCRA - Large Quantity Generators

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

**RCRA-CESQG:** RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/30/2011  Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/30/2011  Telephone: 703-603-0695
Date Made Active in Reports: 01/10/2012  Last EDR Contact: 03/12/2012
Number of Days to Update: 11  Next Scheduled EDR Contact: 06/25/2012
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/30/2011  Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/30/2011  Telephone: 703-603-0695
Date Made Active in Reports: 01/10/2012  Last EDR Contact: 03/12/2012

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Landfill List
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

INDIAN LUST R9: Leaking Underground Storage Tanks on Indian Land
LUSTs on Indian land in Arizona, California, New Mexico and Nevada
INDIAN LUST R4: Leaking Underground Storage Tanks on Indian Land
LUSTs on Indian land in Florida, Mississippi and North Carolina.

State and tribal registered storage tank lists

UST: Underground Storage Tank List
Registered Underground Storage Tanks. UST's are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST program. Available information varies by state program.

AST: Aboveground Storage Tank List
Registered Aboveground Storage Tanks.

INDIAN UST R4: Underground Storage Tanks on Indian Land
The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 4 (Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee and Tribal Nations).

INDIAN UST R1: Underground Storage Tanks on Indian Land
The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 1 (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont and ten Tribal Nations).
INDIAN UST R10: Underground Storage Tanks on Indian Land

Date of Government Version: 02/01/2012

State and tribal Brownfields sites

BROWNFIELDS: Project Tracking Database
Brownfields sites included in the Project Tracking Database. The term “brownfields” is used to describe abandoned, idled, or underused industrial or commercial properties taken out of productive use because of real or perceived risks from environmental contamination. The State of Nevada has initiated Brownfields, a land-recycling program, to provide an opportunity to redevelop these undesirable properties and revitalize communities.

- Date of Government Version: 01/19/2012

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup, and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.
Local Lists of Landfill / Solid Waste Disposal Sites

DEBRIS REGION 9: Torres Martinez Reservation Illegal Dump Site Locations
A listing of illegal dump sites location on the Torres Martinez Indian Reservation located in eastern Riverside County and northern Imperial County, California.

Date of Government Version: 01/12/2009
Date Data Arrived at EDR: 05/07/2009

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

- **Last EDR Contact:** 03/14/2012
- **Next Scheduled EDR Contact:** 06/25/2012
- **Data Release Frequency:** Annually

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

- **Date of Government Version:** 09/14/2010

Last EDR Contact: 05/23/2012
Next Scheduled EDR Contact: 09/10/2012
Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The
information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA
(Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions
are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters
with updated records, it was decided to create a HIST FTTS database. It included records that may not be included
in the newer FTTS database updates. This database is no longer updated.
HIST FTTS Insp: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

ICIS: Integrated Compliance Information System
The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

PADS: PCB Activity Database System
PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

MLTS: Material Licensing Tracking System
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.
RADINFO: Radiation Information Database
The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

- **Date of Government Version:** 01/10/2012

- **Data Release Frequency:** Quarterly

FINDS: Facility Index System/Facility Registry System
FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

- **Data Release Frequency:** Quarterly

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

- **Date of Government Version:** 04/17/1995
- **Date Data Arrived at EDR:** 07/03/1995
- **Date Made Active in Reports:** 08/07/1995

NPDES: Permitted Facility Listing
A listing of permitted wastewater facilities.

- **Date of Government Version:** 04/13/2012
- **Date Data Arrived at EDR:** 04/16/2012
- **Date Made Active in Reports:** 05/01/2012
- **Number of Days to Update:** 15
- **Source:** Department of Environmental Protection
- **Telephone:** 775-687-9414
- **Last EDR Contact:** 04/09/2012
- **Next Scheduled EDR Contact:** 07/09/2012
- **Data Release Frequency:** Varies

AIRS: Permitted Airs Facility Listing
A listing of permitted Airs facilities and their associated emissions information.
HMRI: Hazardous Materials Repository Information Data
Emergency Planning and Community Right-to-Know Act (EPCRA) required facilities which store or manufacture hazardous materials to prepare and submit a chemical inventory report by March 1st of each year to the State Emergency Response Commission (SERC), LEPC and the local fire department. The inventory form must include information on all hazardous chemicals present at the facility during the previous calendar year in amounts that meet or exceed thresholds.

INDIAN RESERV: Indian Reservations
This map layer portrays Indian administered lands of the United States that have any area equal to or greater than 640 acres.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing
The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

COAL ASH DOE: Sleam-Electric Plan Operation Data
A listing of power plants that store ash in surface ponds.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.
FEDLAND: Federal and Indian Lands

Date of Government Version: 12/31/2005
Date Data Arrived at EDR: 02/06/2006

PCB TRANSFORMER: PCB Transformer Registration Database
The database of PCB transformer registrations that includes all PCB registration submittals.
EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

COUNTY RECORDS

WASHOE COUNTY:

Underground Storage Tank in Washoe County

A listing of underground storage tank sites located in Washoe County.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.
Date of Government Version: 01/10/2012

Data Release Frequency: Annually  

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data  
Source: Rextag Strategies Corp.  
Telephone: (281) 769-2247  

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:  
Source: American Hospital Association, Inc.  
Telephone: 312-280-5991  
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing  
Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000  
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes  
Source: National Institutes of Health  
Telephone: 301-594-6248  
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools  
Source: National Center for Education Statistics  
Telephone: 202-502-7300  
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools  
Source: National Center for Education Statistics  
Telephone: 202-502-7300  
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Facility List  
Source: Department of Human Resources  
Telephone: 775-684-1100

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)  
Source: United States Geologic Survey  
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

West Map: 39114-C8 RUTH, NV
Most Recent Revision: 1979

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.
GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5’ Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.
HYDROLOGIC INFORMATION
Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE
Target Property County: WHITE PINE, NV
Flood Plain Panel at Target Property: Not Reported
Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY
NWI Quad at Target Property: EAST ELY
NWI Electronic Data Coverage: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION
Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:
Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®
Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID LOCATION GENERAL DIRECTION
Not Reported FROM TP GROUNDWATER FLOW

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.
GROUNDWATER FLOW VELOCITY INFORMATION
Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY
Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture’s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Telephone: 775-784-6691
Oil and gas well location in the state of Nevada.

RADON

State Database: NV Radon
Source: State Health Division
Telephone: 775-687-7531
Radon Test Results By Zip Code

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey.
The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Brett C. Bottenberg, M.S., C.E.M
Project Engineer

Professional Experience
Mr. Bottenberg is an Environmental Scientist and Engineer with more than 11 years of professional experience in conducting Phase I and II Environmental Site Assessments (ESAs), National Environmental Policy Act (NEPA) reviews, Spill Prevention, Control, and Countermeasure (SPCC) Plans, Bioremediation Plans, Brownfields Assessments/Project Management, complex laboratory analyses, and analytical data review. Applied experience includes conducting over 400 Phase I ESAs, Phase II ESAs, SPCC Plans and NEPA reviews throughout Nevada, California, Utah, and Arizona. Mr. Bottenberg’s diverse background provides project management experience in both the regulatory and construction industries. Further, Mr. Bottenberg has valuable knowledge pertaining to contaminant transport, chemical interactions, and remediation systems.

Project Experience

Bioremediation Plan
• **Confidential Oil Production Client, Nevada** – Project Manager responsible for design and implementation of a bioremediation plan to treat soils contaminated with crude oil at an oil production facility in rural Nevada.

Spill Prevention, Control, and Countermeasure Plans
• **Various Confidential Corporate Clients, Nevada and California** – Project Manager responsible for authoring SPCC Plans for oil production facilities, bulk oil plants, and industrial/commercial facilities containing above ground oil storage greater than 1,320 gallons in order to comply with 40 CFR 112 regulations.

Phase I / II Environmental Site Assessments and NEPA Review Projects
• **Confidential Corporate Client, numerous sites within Nevada and Utah** – Project Manager responsible for providing Phase I Environmental Site Assessments and NEPA Reviews for cellular co-location and new construction projects throughout the State of Nevada. Responsible for communication with State Historic Preservation Office (SHPO) and Native American Cultural Groups in order to comply with Section 106 of the National Historic Preservation Act, Federal Communications Commission (FCC) regulations 47 CFR 1.1301-19 and the Nationwide Programmatic Agreement for the Collocation of Wireless Antennas (PA).

• **Confidential Corporate Clients, numerous sites within Nevada** – Project Manager responsible for providing due diligence expertise within the banking, construction, and real estate industries. Managed and authored over 350 Phase I Environmental Site Assessments and Transaction Screen Assessments for various companies located in Las Vegas and throughout the western states.

• **Confidential Corporate Client, Las Vegas, NV** – Project manager responsible for sampling for lead based paint within Section 8 apartment housing in downtown Las Vegas.

• **Confidential Public Client, Las Vegas, NV** – Project manager responsible for Phase I and Phase II Environmental Site Assessments performed on various properties throughout Las Vegas, Nevada.
Brownfields Projects

- **State of Nevada Brownfields Projects** – Project manager responsible for community outreach, local government assistance, and conducting assessments on blighted properties that are proposed to be renovated and/or developed by cities, towns, counties, or non-federal government agencies within the State of Nevada.

Laboratory Analysis and Data Review Projects

- **Silver State Analytical Laboratory, Las Vegas, NV** – Co-founder of a large environmental laboratory in Las Vegas, NV. Provided expert knowledge of laboratory analysis, including the use of gas chromatography, gas chromatography mass spectrometry, titrations, colorimetric analysis, and atomic absorption. Responsible for regulatory documentation related to State of Nevada certification.

- **Nevada Federal Public Defenders Office, Las Vegas, NV** – Helped provide expert analysis of chain of custody, sampling protocol, and laboratory data for a case involving the prosecution of the owners of a small metals plating business in Las Vegas, NV. Was able to provide valuable information to the Public Defender in their successful defense.

- **Washington State University, Pullman, WA** – Research Assistant responsible for design and implementation of laboratory projects studying the effectiveness of chemical oxidation for remediation of common soil and groundwater contaminants, including benzene, toluene, perchloroethylene, and carbon tetrachloride. Designed complex soil-water systems with successful results that enabled eventual grant awards for further research in these areas.

- **Washington State University, Pullman, WA** – Researcher responsible for design of specific laboratory systems to study Fenton’s Reagent and its role in the enhanced desorption and transformation of chloroaliphatic compounds within modified Fenton’s reactions. Determined that vigorous reactions of soluble iron and hydrogen peroxide can not only oxidize organic compounds, but also induce desorption of those compounds from organic material with subsequent oxidation and/or reduction.

Education

B.S., Civil Engineering, Washington State University, 1995.

Certifications and Registrations

Nevada Certified Environmental Manager, EM#1690.
Engineer in Training, EIT#20066.
OSHA Hazwoper 40 Hour Certification.
OSHA Hazwoper 8 Hour Refresher.
Adult First Aid/CPR/AED Certification.

Affiliations

Commercial Real Estate Development Association (NAIOP).
Nevada Professional Facilities Managers Association (NPFMA).
Joseph M. McGinley, P.E., P.G., C.E.M.
Principal

Professional Experience

Mr. McGinley is a Professional Engineer (NV), Professional Geologist (CA) and Certified Environmental Manager (NV) with more than 28 years of service to long standing and new clients alike. He has developed experience through a wide range of project types, environmental conditions, and multiple regulatory agency liaisons. Mr. McGinley has a strong background in site characterization, corrective action plan development and in the design and implementation of remedial systems. He is acutely familiar with federal, State and local environmental regulations and has developed a familiar relationship with the administrators of those agencies throughout the West.

Selected Project Experience

Phase I Environmental Site Assessments

- Project Principal responsible for the completion of over 400 Phase I ESAs in Nevada, California, Arizona, Oregon and Utah. Projects performed for various lending institutions, developers, governmental agencies, private property owners, non-profit organizations, and others. The Phase I ESAs are prepared in accordance with the American Society for Testing & Materials (ASTM) standard E1527–05 and the All Appropriate Inquires (AAI) as promulgated in the USEPA ruling 40 CFR part 312.

Select Environmental Site Assessment and Remediation Projects – Chlorinated Solvents and other CoCs

- **Boeing/Rocketdyne Former Nevada Field Laboratory, Reno NV** – Project Principal responsible for providing system design and performing the remediation of chlorinated solvents and perchlorate at three sites of this former rocket engine test facility.

- **BMI Complex and Common Areas, and Las Vegas Wash, Henderson, NV** – Project Principal responsible for administering and directing the technical review team services for third-party review of the assessment and remediation of broad suites of contaminants in soil, groundwater, and surface water.

- **Harrah’s Hotel and Casino, Reno, NV** – Project Principal responsible for the design and oversight of installation of two air stripping units to remove PCE from groundwater as part of perpetual de-watering activities. Each stripping unit was designed to be capable of treating 500 gallons per minute and was permitted to discharge via a NPDES permit to an adjacent surface water body.

- **Big Tree Cleaners, Tahoe City, CA** – Project Manager responsible for services including: permitting; regulatory liaison; corrective action plan preparation (chlorinated solvent (PCE) contamination); remedial system design, installation, monitoring and reporting.

- **Reno Old Town Mall, Reno, NV** – Project Principal responsible for providing services including: groundwater monitoring; corrective action plan preparation; remedial system design and regulatory liaison for this PCE release site.
• State of Nevada Division of Environmental Protection, Downtown Reno Ground Water Characterization Project, Reno, NV – Project Manager responsible for the assessment and characterization of a PCE plume in downtown Reno, Nevada which impacts a potable water supply.

Select Environmental Site Assessment and Remediation Projects – Petroleum Products

• University of Nevada, Reno, NV – Project Manager responsible for the closure of the former Dodd/Beal fire fighting academy located in Stead, Nevada. Performed site characterization and assessment of the 57 acre parcel followed by the completion of a human health risk assessment to establish Site Specific Target Level (SSTL) for soil remediation. Remedial technologies utilized at this site included air sparging, monitor natural attenuation, bioremediation and vacuum extraction.

• Berry Hinckley Industries, various sites, CA and NV – Project Principal responsible for the assessment, remediation and state petroleum fund reimbursement procurement at several petroleum product sites. Services included site assessments, remedial design, and remediation system operation and optimization.

• Gold Ranch Casino, Verdi, NV – Project Principal responsible for services including: site assessment, free petroleum product (NAPL) removal, groundwater remediation design and system operations.

• State of Nevada Division of Environmental Protection (NDEP) – Project Manager for the administration of the Federal LUST TRUST program for the State of Nevada.

• Cross Properties, Truckee, CA – Project Principal responsible for the assessment and remediation activities performed at two former retail gasoline sites.

• Squaw Valley Ski Resort, Squaw Valley, CA – Project Principal responsible for the oversight of UST removal activities; site assessments; permitting; corrective action plan preparation; remedial system design, installation, monitoring and reporting.

• Former Allied Washoe Bulk Plants, various sites, CA and NV – Project Principal responsible for providing assessment and remediation services for three bulk fuel distribution facilities. Services provided included: contaminated soil excavation; dewatering activities; permitting; regulatory liaison; corrective action plan preparation; remedial system design, installation, monitoring and reporting.

• Elko County School District property, Elko, NV – Project Principal responsible for providing services including: contaminated soil excavation; site assessment permitting; regulatory liaison; corrective action plan preparation and reporting.

• Carson Valley Oil Bulk Plant – Project Principal responsible for site assessment and remediation services following a kerosene release at this operating bulk fuel plant. Services performed included site assessment; corrective action plan preparation; remedial system design, installation, monitoring and reporting.
• **Winnemucca Farms, Winnemucca, NV** – Project Principal responsible for providing services including: site assessment; vadose zone monitoring; groundwater flow and contaminant transport modeling performed at an operational potato processing plant.

• **State of Nevada Division of Environmental Protection** – Project Manager for the administration of the Federal Environmental Mitigation and Assessment program (EMAR), State of Nevada.

• **Cutler Property, Susanville, CA** – Project Principal responsible for providing services including: site assessment; corrective action plan preparation; and remedial system design for this former gasoline service station.

• **State of Nevada Division of Environmental Protection, various sites, Sparks, NV** – Project Manager responsible for providing third party review of ground water remediation of petroleum hydrocarbons and chlorinated solvents at the Sparks tank farm and Helms Pit for NDEP and the Washoe County Health District.

• **University of Nevada, Reno, various sites, NV** – Project Manager responsible for the oversight of the removal of 20 USTs; and providing site assessments and remediation system design/installation/operation for these sites, as applicable.

• **Western Energetix Corporation, various sites, CA and NV** – Project Manager responsible for providing services relating to LUST site assessment and remediation activities performed at 15 facilities in Nevada and California. Remedial technologies employed included bioremediation, air sparging, vacuum extraction and ground water pump and treat.

• **First Interstate Bank, Reno, NV** – Project Manager responsible for providing services including the assessment and monitoring of PCE and TCE at this proposed commercial development site.

• **ARCO Products, various sites, NV** – Project Manager responsible for providing site assessments and remedial designs for 12 facilities in northern Nevada.

• **Texaco USA, Inc., various sites, NV** – Project Manager responsible for providing services related to site assessments and remedial designs for five facilities located in Nevada. Remedial technologies employed included groundwater pump and treat, air sparging, vacuum extraction.

• **Nevada Thermal Service, various sites, NV** – Project Manager provided review of California Title 22 – Hazardous Waste Classification of soils imported to the State of Nevada for over 100 sites.

• **Sierra Pacific Power Company, Elko, NV** – Project Manager providing remedial design utilizing bioventing following UST removal at this facility.

• **Regional Transportation Company, Reno, NV** – Project Manager responsible for oversight of UST removal, upgrade activities, site assessment and remedial actions.

• **City of Sparks, Nevada** – Project Manager responsible for the oversight of the removal of 18 USTs, site assessment activities and remedial actions.

• **Dermody Properties, various sites, NV** – Project Manager responsible for the oversight of UST removal at 10 facilities, site assessment and remedial actions.
• **Silver State Trucking, Sparks, NV** – Project Manager responsible for the design and permitting of free phase (NAPL) petroleum product removal system and groundwater pump and treat system at this truck stop.

• **Time Oil Property, Fallon, NV** – Project Principal responsible for providing services related to a UST petroleum product release at this operating facility including environmental site assessment, regulatory liaison, corrective action plan preparation, remedial system design and report preparation.

• **Buggy Bath Car Wash, Reno, NV** – Project Manager responsible for the design of an *in-situ* vacuum extraction system, groundwater pump and treat and air sparging system at this operating facility in Reno, NV.

**Select Brownfields Projects**

• **State of Nevada, Brownfields Contract, NV** – Project Principal responsible for the implementation of the State of Nevada’s Brownfields Grant throughout the State of Nevada. Services included development and review of applications for governmental and municipal clients; development of project documents including Phase I and II ESAs, human health risk assessment, health and safety plans, etc.; and acquiring regulatory closure for these sites.

**Select Expert and Material Witness Projects**

• University of Nevada System v Clark Sullivan Constructors, et al

• Nevada Division of Environmental Protection and Dermody Properties vs. Sparks Fuel and Solvent site consortium

• Kelly v State Farm, et al

• Time Oil v Fredrickson Trucking, et al

• NDEP v Hagar

• Fallon Lawsuit (Leukemia cluster)

**Education**

M.S., Civil Engineering, University of Colorado, Boulder, 1983.

**Certifications and Registrations**

Professional Engineer, Nevada, GEO #7472.

Professional Geologist, California, PG #7409.

Certified Environmental Manager, Nevada, CEM #1036.

MSHA Part 46, New Miner Training.
