Mr. Chad R. Schoop, P.E.
Professional Engineer
Bureau of Industrial Site Cleanup (BISC)
Nevada Division of Environmental Protection (NDEP)
2030 E. Flamingo Road, Suite 230
Las Vegas, NV 89119

RE: Third Quarter 2019 Quarterly Progress Report
Former Stauffer Chemical Company Facility (“Site”)
NDEP Facility ID #H-000536 Pioneer/Stauffer
Henderson, NV

Dear Mr. Schoop:

This Quarterly Progress Report (QPR), prepared on behalf of Stauffer Management Company LLC (SMC) and Pioneer Americas LLC [dba] Olin Chlor Alkali Products (Pioneer), summarizes Phase II Environmental Conditions Investigation (ECI) activities performed at the Site during the Third Quarter of 2019. This QPR is submitted to NDEP in accordance with the June 28, 1996 Phase II Consent Agreement, entered into by NDEP, Pioneer, and SMC. Notable activities performed during the reporting period include:

- On behalf of Pioneer and SMC, the Second Quarter 2019 QPR was submitted to NDEP on July 15, 2019.
- On behalf of Pioneer, a revised Shallow Soil Characterization Work Plan for the Historic Caustic Storage Area (HCSA) was submitted on August 13, 2019. The revised submittal incorporated NDEP’s June 13 comments. NDEP approved the revised submittal on August 27. Pioneer anticipates implementing the approved work plan in fourth quarter of 2019.
- Pioneer is continuing to work on preparing a draft conceptual level remedial design document for Letter of Understanding (LOU) areas 17 and 20. Pioneer anticipates submitting the conceptual design document for NDEP’s review in fourth quarter of 2019.
- On behalf of SMC/ Syngenta Crop Protection, LLC [Syngenta], Pioneer executed Environmental Covenant for BHC Cake Pile 3 was submitted to NDEP on September 4, 2019.
The OSSM Companies (Pioneer, SMC/Syngenta, and Montrose Chemical Corporation of California) performed the following notable activities during the reporting period:

- As requested by Clark County’s Department of Air Quality (DAQ), the Companies recalculated groundwater treatment system (GWTS)’ air emissions in tons per year using the Potential to Emit (PTE) value and revised/resubmitted the 2018 annual air emissions inventory report on July 22, 2019.
- The Semi-annual Underground Injection Control (UIC) and Semi-annual Operations reports for the GWTS were submitted to respective agencies on August 9 and August 15, 2019, respectively. The reports demonstrated that the treatment system is operating effectively and is in compliance with the applicable standards/limits.
- On September 11, 2019, the OSSM Companies participated in a routine quarterly status call with NDEP regarding the status and progress of ongoing Site activities.
- On September 23, 2019, the OSSM Companies requested that NDEP obtain all relevant data collected from NERT’s new monitor well(s) in the vicinity of Site’s eastern property boundary.
- During the reporting period, the GWTS operated appropriately and continues to effectively capture and contain impacted shallow groundwater.
- The Companies are continuing efforts to characterize/investigate Site LOU areas to achieve NDEP administrative closure, or no further action determinations.

Should you have any questions related to the information contained herein, please contact me at (423) 336-4675, via email at cesakkiperumal@olin.com, or an alternate Company representative.

Sincerely,

Chinny Esakkiperumal, PG, CEM (EM2409; Expires October 12, 2021)
Olin Corporation

Environmental Investigation and Cleanup at the
**Former Stauffer Chemical Company Facility**

**Henderson, Nevada**

Stauffer Chemical Company formerly operated a chemical manufacturing facility at the property (i.e., “the Site”) which is now occupied by Olin Chlor Alkali Products at the western end of the Black Mountain Industrial Complex (formerly known as the BMI Complex), in an unincorporated area of Clark County, near Henderson, Nevada. Stauffer ceased operations at the property in 1988 when the property was purchased by Pioneer Chlor Alkali, Inc. (Pioneer). Olin Corporation (Olin) purchased the property from Pioneer Americas LLC (Pioneer) in 2007. Pioneer, Stauffer Management Company LLC (SMC), and Syngenta Crop Protection, Inc. (Syngenta) are working in cooperation with the Nevada Division of Environmental Protection (NDEP) on continuing environmental investigation and cleanup activities at the Site. This Fact Sheet, prepared on behalf of Pioneer and SMC/Syngenta, is intended to keep community members informed about the status of the environmental investigation and cleanup. Other companies at neighboring properties within the BMI Complex are also performing environmental work. These companies include: Nevada Environmental Response Trust (previously known as Tronox LLC; formerly Kerr-McGee Chemical Company), Titanium Metals Corporation and Basic Remediation Company. Montrose Chemical Corporation of California (Montrose) is also performing environmental work at the Site in areas associated with their former operations. All of these companies have developed separate Fact Sheets related to their environmental work.

**History**

In 1941, approximately 5,000 acres of desert in the southwest portion of the Las Vegas Valley was deeded by the United States for use as what was to become the world’s largest magnesium plant (BMI Complex), a plant constructed for the U.S. Government that would play a critical role in World War II. The location was selected in part based on its proximity to magnesite ore and an adequate power supply (then recently completed Hoover Dam).

The western end of the original BMI Complex included a chlorine-caustic plant which was necessary to support the U.S. Government’s production of magnesium. In 1945, Stauffer Chemical Company leased the chlorine-caustic plant from the U.S. government, and later purchased the property in 1952.

The property was ultimately sold to Pioneer in 1988. During Stauffer Chemical Company occupancy, the manufactured products included chlorine and caustic, and later, agricultural chemicals. Additionally, portions of the property were leased to Montrose for their manufacture of chemicals.

Today, the Site is operated by Olin Chlor Alkali Products for the production of bleach, as well as handling of chlorine, caustic soda, and hydrochloric acid; non-chlor alkali chemical productions ceased prior to 1988.
ENVIRONMENTAL WORK

As part of the 1983 Consent Order entered into between the NDEP, Stauffer and Montrose, a groundwater pump and treatment system was installed to address impacted groundwater identified at the Site. The groundwater pump and treatment system at the Site continues to effectively operate, as do other groundwater pump and treatment systems being operated by other nearby companies to address impacted groundwater.

In 1991, Pioneer and SMC entered into a Consent Agreement with the NDEP to jointly conduct a Phase I Environmental Conditions Assessment (ECA) of the Site. The purpose of the ECA was to identify areas of potential environmental concern. Pioneer and SMC submitted their ECA report to the NDEP in 1993 and thereafter agreed to the terms of the 1994 Phase II Letter of Understanding (LOU) with the NDEP. The LOU identified issues of potential environmental concern (Study Items) to be addressed in the next phase of investigation. In 1996, Pioneer and SMC entered into a subsequent Consent Agreement with NDEP requiring them to jointly conduct a Phase II Environmental Conditions Investigation (ECI) and to prepare Remedial Alternative Study (RAS) work plans for those Study Items, as necessary. Since 1996, several phases of environmental characterization and a series of reports have been completed by Pioneer and SMC to assess soil and groundwater conditions, and RAS work plans have been prepared and remedial actions implemented, including the construction of asphalt caps (in 2003 and 2004) over the former agricultural chemical manufacturing plant areas.

The focus of recent environmental work activities has been developed based upon the review of historical Site operations, submittal of additional work plans, preparation of reports and correspondence with the NDEP, and development of a list of Site related chemicals (SRCs) to assist in additional sampling activities. Additionally, annual groundwater monitoring is performed to assess the occurrence of chemicals in groundwater at the Site and areas downgradient of the existing groundwater pump and treatment system, and to demonstrate compliance for operation of the groundwater pump and treatment system in accordance with the terms of the 1983 Consent Order. The information and data from previous reports and investigations have been integrated into a comprehensive Conceptual Site Model (CSM) that was prepared by Pioneer, SMC/Syngenta and Montrose in July 2008. The CSM presents the current understanding of Site conditions, describes potential exposure pathways related to soil and groundwater conditions, and identifies areas where future environmental characterization may be appropriate. The companies are currently in the process of finalizing a Groundwater Remedial Alternatives Study for the evaluation of possible remedial actions.

FUTURE WORK

Pioneer and SMC/Syngenta will continue to perform environmental investigations as described above in cooperation with the NDEP. Additional environmental cleanup work will be conducted as appropriate based on the results of these investigations and the CSM. The groundwater pump and treatment system will continue to be operated and monitored to maintain its effectiveness.

ADDITIONAL INFORMATION AND COMMUNITY INVOLVEMENT

The NDEP oversees all aspects of the environmental work at the Site.
Additional information from the NDEP can be obtained by contacting Chad R. Schoop, at 702-486-2850 x 248 or cschoop@ndep.nv.gov.

The companies welcome community input for this project and recognize the need to respond to community concerns. Previous reports related to the environmental work at the Site can be obtained from NDEP’s offices in Las Vegas or Carson City.
